DETAILED ACTION

Election/Restrictions

Applicants have cancelled all restricted claims and replace those with new claims 18-22. No election was necessary.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 18-22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 18-22 are newly added. However, no support is found for the limitation (claim 18), "wherein the spacing between particles within the array can be varied by varying the strength of the magnetic field". The specification discusses varying the strength of the magnetic fields when assembling particles to the planar substrate but fails to disclose about varying the spacing between the particles.

Applicants are required to point out support for this limitation.

This is a new matter rejection.

Claims 18-22 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Assembling the magnetic microparticles in an array

before taking the decoding image (image of optically distinguishable signature) is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The present specification on paragraph [0078] discloses that the decoding image is taken after the beads are assembled in an array and immobilized and before taking the assay image, i.e. before contacting with the analytes. Without such step, the decoding image could not be taken. The present claims recites an assembling step after contacting with the sample.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 18-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 18 is unclear if the imaging of the optically distinguishable signatures is taken after the assembly of the magnetic particles by a magnetic field.

Claim 18 is also unclear if more than one magnetic field is being used for the microparticles. The specification on paragraph [0121] describes that "magnetic fields" are applied to the microparticles.

Claim 21 is confusing because it is unclear which image "imaging" refers to, i.e. image after adding the analytes or before adding the analytes.
